MEDIUM SEVERITY

SQL Injection

Vulnerable module: [sql](#)

Introduced through: [sql@1.0.0](#)

Detailed paths and remediation

Introduced through: sql@1.0.0

Remediation: No remediation path available.

Overview

[sql](#) is a sql string builder for node - supports PostgreSQL, mysql, Microsoft SQL Server, Oracle and sqlite dialects.

Affected versions of this package are vulnerable to SQL Injection. A malicious user may insert potentially user-controlled content into the queries without proper escaping, in cases where that is not verified additionally in the applications that are using sql library.
